Adhvaga - Phase 0 done

7 Nov 2026 · plan v2.1 · nothing signed up, paid for or published

> **In one line:** the brief (PRD), the source checks and all 100 test cases are written. Two free data sources (trains and flights) allow only 100 requests a month, so Adhvaga will save and reuse answers. Next: build the trip "brain" (Phase 1) on the laptop. Your keys are only needed from Phase 2.

1	3	13	100
PRD	user journeys	golden journey steps	test cases

1. What was made

File	What is in it
01 PRD	Problem, goal, 3 journeys, golden journey script (Delhi to Jaipur), who does what, permission matrix, 6-field budget, quota protection, success measures
02 Registers	Every data source checked live today; rule documents list; cost and free limits
03 Test cases (100)	10 groups, each case with input, expected tools, code checks and release blockers. Also saved as a data file the test runner will load

All in **Claude Vault > Projects > Adhvaga > Phase 0**.

2. Data sources, checked today

Source	For	Free limit	Verdict
RailRadar	Trains, live status, cancellations	100 requests / month	Usable with saving
AviationStack	Flight status	100 requests / month	Usable with saving
Neon Postgres	The one database	1 GB, no card, no overage bill	OK
Groq	The AI	~1,000 requests / day (big model)	OK
Delhi Metro open data	Metro timetable	Free; last updated Aug 2023	Needs your download
Kochi Metro open data	Metro timetable	Free, official	OK

Bengaluru Metro	Metro timetable	Unofficial copy only	Label "unofficial"
Intercity buses	Buses	No free API in India	Simulated + you enter

> **What changed because of this:** every provider answer is saved with its time. Timetables are reused for 24 hours, live status for 15 minutes. When a monthly allowance runs out, Adhvaga says "Unavailable (QUOTA)" and still shows the saved timetable. Tests never use real requests.

3. The 100 tests

Group	Cases	Group	Cases
Normal planning	12	Rule library answers	12
Disruptions	14	Failures and stale data	10
Hard rules	10	Approvals and permissions	10
Preferences	8	Knock-on replans	8
Budget maths	10	Labels and freshness	6

A release is blocked by any one of: a hard rule broken, a permission broken, a money error, an outage shown as "none", a simulated option shown as real, or a quote that does not support its claim.

4. Needs your hands (when you are back)

#	What	Needed by
1	Read the PRD and say OK (or change it)	Before Phase 2
2	RailRadar free key	Phase 2
3	Delhi Metro data download (asks your email + their terms)	Phase 2
4	Groq free key, Neon free project	Phase 2
5	AviationStack free key	Phase 3
6	Vercel, Emergent go	Phase 5

I will walk you through each one step at a time. Never screenshot a secret key.

5. Next

Phase 1, on the laptop only: the Trip server - database tables, rules engine, permissions, money maths in paise, versions and leg links, the answer envelope - with its tests. A small built-in Postgres (PGlite) stands in for Neon until you sign up.
